UNITS/PALLET 48

All joint compounds meet ASTM C-475.
ALL PURPOSE JOINT COMPOUND
- Use for taping, topping and texturing
- Excellent bond and low shrinkage
- Excellent for all applications

BLUE DOT LIGHT WEIGHT TAPEING
- Easy handling for increased productivity
- Great open time
- Great bond

TNT LITE LIGHT WEIGHT TAPEING & TOPPING
- Less weight increases ease of finishing and handling
- Low shrinkage
- One mud system decreases waste

GREEN DOT LIGHT WEIGHT TOPPING
- Easy handling for increased productivity
- Excellent workability
- Easy sanding and low shrinkage

HI LITE MID WEIGHT ALL PURPOSE
- Less weight increases ease of finishing and handling
- Low shrinkage
- One mud system decreases waste

SUPER LITE LIGHT WEIGHT ALL PURPOSE
- 40% lighter than conventional joint compounds
- Easy handling for increased productivity
- Excellent workability, easy sanding and low shrinkage

All joint compounds meet ASTM C-475.

TAPING COMPOUNDS

Taping compounds are designed specifically for embedding paper tape to joints and angles. Extended open time, ease of mixing and the slickness of these products allows the professional applicator to apply tape faster. Westpac Taping Compounds produce maximum bond and provide an excellent base for subsequent top coats.

ALL PURPOSE COMPONDS

These All Purpose Compounds are approved for all applications associated with drywall finishing. They combine the benefits of our Taping Compounds with our Topping Compounds into one. This enables the applicator to use one mud for all applications.

WALL TEXTURES

Textures are formulated at different solid levels. This chart describes each texture’s solids level at an equal viscosity (i.e. thickness). The higher solids level equates to greater stand-out (or more material-heavier texture) on the wall. The lower solids level typically equates to higher mileage (or less stand-out-finer texture).

<table>

<tr>
<td>LOW SOLIDS</td>
<td>Blue Line, Red Line</td>
</tr>
</tbody>
</table>

CEILING TEXTURES

Ceiling Textures are formulated with the original coarse aggregate at different ratios to solids. The chart describes each texture’s aggregate ratio at an equal viscosity (i.e. thickness). The higher aggregate ratio typically equates to heavier texture appearance. The lower aggregate level typically equates to easier application.
